

LANDesk® Antivirus

Simple, Enterprise-Ready Antivirus Protection

Protect Systems across Your Enterprise from a Single Console

Every enterprise needs to protect its data and keep its endpoint systems operating as they should. But paying for, installing, administering and training on different products for endpoint security, patch management, virus protection and systems management can impact your bottom line, try the patience of your IT staff and jeopardize your enterprise's long-term ability to thrive and outpace the competition.

LANDesk® Antivirus: Enterprise-Ready Virus Protection Added to Single Console Simplicity

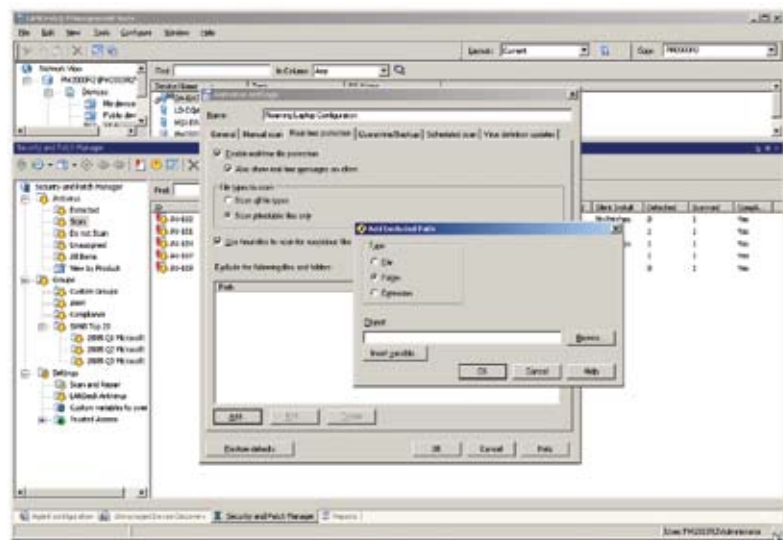

LANDesk® Antivirus extends the power of LANDesk® Management Suite and LANDesk® Security Suite to give you enterprise-ready antivirus and rootkit detection from the same console and vendor you rely on for systems and security management—and for a lower investment than many competitive solutions. Now you can affordably extend world-class virus protection to your endpoints with little or no new infrastructure, less training and fewer vendors and hassles to deal with. You access complete, single-console protection and management.

LANDesk Antivirus helps you:

- Extend world-class virus protection to your enterprise for a lower investment than many competitive solutions.
- Reduce costs and complexity with a single-agent, single-console solution for enterprise-ready and third-party virus protection and root kit detection.
- Protect critical enterprise data and user productivity by identifying, reducing and mitigating the risk of virus outbreaks in real-time.
- Give IT complete control to align antivirus settings with corporate policies and prevent end-user error and intervention.
- Save time and free up resources with a centralized, automated, hands-off solution for detecting and mitigating the effects of viruses and virus outbreaks on systems managed by LANDesk® solutions.
- Empower IT and executives with a quick, easy way to see which systems are protected or vulnerable, and how virus protection is progressing over time.

Designed for the enterprise, LANDesk Antivirus offers optimized virus detection and removal—with only one agent to install and only one console to train on and use to further protect all your Windows-based systems.

The time lag between patch releases and the exploitation of endpoint vulnerabilities continues to rapidly decrease. In 2003, the Blaster virus struck 28 days after the vulnerabilities it exploited was first discovered—plenty of time to install a patch, if you were proactive. But in late 2005, both the Msddd.dll and WMF vulnerability attacked before patches were available. The zero-day threat is quickly becoming more and more of a reality. While patch management remains critical, you need proactive virus protection that secures your network against attack.

LANDesk® Antivirus helps you enforce real-time virus protection.

Quickly Assess and Alleviate Virus Risks

Protect your valuable corporate resources and critical data with a complete, enterprise-ready antivirus and root kit detection solution that runs from a single console under strict IT control. LANDesk® Antivirus places your IT staff in the driver's seat for the most efficient validation, distribution and enforcement of antivirus policies and definition files. And with LANDesk Antivirus, your enterprise has the power to respond to new threats as quickly as they're discovered.

Place Security Control where it Belongs—with IT

Consumer-oriented solutions make guinea pigs of your end users and nervous wrecks of your IT team each time an update becomes available—and they depend on constant end-user cooperation in order to provide any meaningful protection. Not so with LANDesk® Antivirus. It places control of virus definition updates and scanning schedules solely in the hands of your IT staff. You choose the level of interaction permitted by end users—including role-based permissions to selected features, for example, allowing users to initiate scans while preventing them from reconfiguring or disabling the user agent.

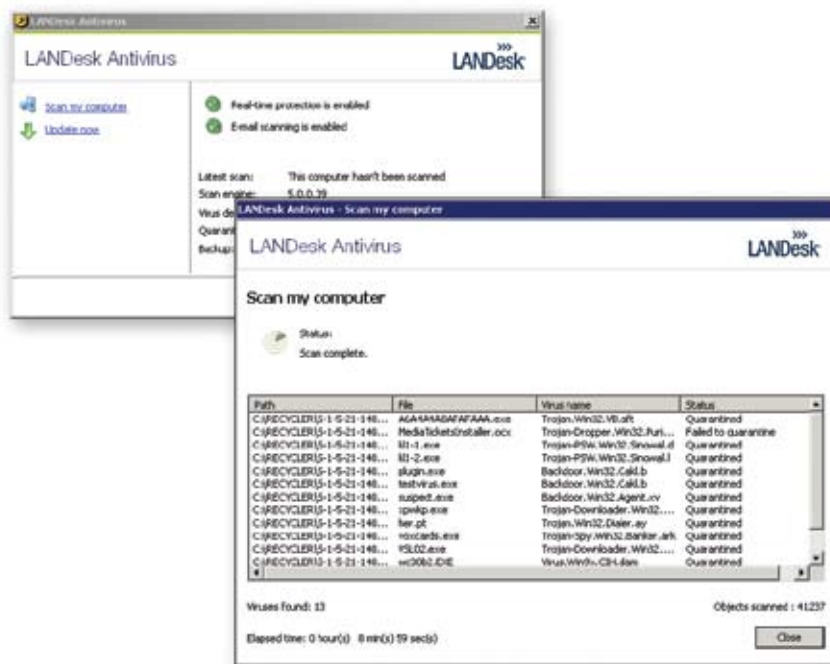

With total IT control over validation, updates, scanning schedules, user permissions and more, you have unsurpassed assurance that your corporate antivirus policies are always effective and enforced.

Centralize Security Management

LANDesk® Antivirus centralizes virus protection under the control of a single console. Use LANDesk Antivirus to bring centralized enterprise-ready virus protection to your company, as well as for a single console solution for managing antivirus software from McAfee, Norton, Sophos, Symantec or Trend-Micro.

Reduce Costs and Complexity

When IT takes full control over antivirus management—using a single, integrated console—you spend less time and money training IT staff and significantly reduce the need to train end users in security procedures. Moreover, you save time and money fixing what end users break. You also reduce complexity, with only a single agent on each network endpoint and a single point for monitoring and managing antivirus activities. Plus, you increase uptime, efficiency and productivity in the IT department and the entire organization.

LANDesk® Antivirus allows your enterprise to retain control over antivirus protection and automatic scans while still allowing end users to launch antivirus scans.

Establish and Extend Control When You Want

LANDesk® Antivirus lets your enterprise detect and remedy viruses for the computers on your network. And it's an add-on to both LANDesk® Security Suite and LANDesk® Management Suite—so you can choose the right combination of systems and security management capabilities to bring even broader centralized control over your entire network environment.

—LANDesk Management Suite lets your enterprise proactively see, manage, update and protect IT systems through a single console.

—LANDesk Security Suite extends active security management to the endpoint with quarantine capabilities, active threat analysis, spyware detection and removal, access control, configuration security tools and more. Add LANDesk Antivirus to LANDesk Security Suite and bring even broader security capabilities to your enterprise from a single console and vendor with less training and fewer hassles.

With LANDesk, the choice is always yours. No matter what combination of solutions you choose, they all work together seamlessly so you control everything from a single, intuitive management interface.

Key Features

World-Class Antivirus Protection and Scanning

- Access world-class enterprise-ready antivirus capabilities and enforce real-time virus protection.
- Control pattern file and engine updates with scheduled scans to targeted systems, urgent “scan now” capabilities and more.
- Pre-stage pattern file updates to a group of pilot or test computers for as long as you like before rolling out the file to your entire organization.
- Allow users to launch antivirus scans, while retaining central control to prevent them from defeating automatic scans.
- Use less space on user machines with a small, unobtrusive file footprint that can quickly scan and detect exploits, malware and viruses.
- Detect vulnerable email attachments in Outlook.

Centralize Configuration and Management

- Lock down the end-user agent to prevent unauthorized changes.
- Use role-based administration to grant privileges for adding, deleting or changing configuration of the LANDesk® Antivirus core and client settings.
- Align antivirus management with your corporate policies, with full, flexible control over who can deploy the agent, to which devices, and how the agent is configured on each device.

Easily Validate and Deploy Virus Definition Files

- Rapidly and selectively deploy new virus definition files to a pilot group, while delaying deployment to the rest of the network until the files are validated.
- Easily define members of the pilot group as part of the configuration, automating the correct distribution of files for each rollout.
- Roll out virus definition files in phases, minimizing the risk that a newly deployed file will have unintended effects on network resources or users.
- Schedule automatic updates to virus definition files, controlling which versions are approved, when they are deployed and how they are configured.
- Grant end-users the ability to launch antivirus updates, if needed; you control whether they can access only your approved updates or live updates directly from LANDesk® updates.
- Roll back to previous virus definition files in the event that a new file causes problems.

File Quarantine

- Encrypt and quarantine suspicious files and known infections that can't be immediately cleaned.
- Provide optional view-only access to the quarantine folder, so end users can see what's there but can't open a suspect file and risk infection.
- Automatically scan quarantined files when new virus definition files are released, returning successfully cleaned files to active use.
- Automatically back up cleaned files in case of file corruption that requires further remediation.
- Customize your solution for detecting, trapping and mitigating potential viruses—from vigilant and methodical to rapid, hands-off control.

Reporting and Alerts

- Receive an alert by email, pager or another preferred method whenever a machine can't be automatically cleaned.
- Gain granular control over alerts regarding actions for quarantine and clean and suspicious content.
- Create custom queries and reports that combine inventory with antivirus and configuration information.
- Identify computers that are infected, haven't been recently scanned for antivirus or that have outdated virus definition files.
- Provide end-user notification of virus scanning and removal processes.
- Report antivirus activities and history to learn what resources are vulnerable and what viruses are being detected.
- Use LANDesk® Antivirus reports to identify and mitigate risks, as well as to educate users about activities that could lead to infection.

LANDesk® Executive Dashboard

- Access a simple graphical dashboard to identify virus outbreaks in real-time, as well as to chart virus control activities over time.
- Easily demonstrate IT's progress and value to executive staff.
- Gauge the percentage of computers with up-to-date virus definitions and with real-time antivirus enabled at a glance.

Antivirus Enforcement of Third-Party Solutions

- Manage antivirus solutions from McAfee, Norton, Sophos, Symantec and Trend-Micro using the same console.
