

LANDesk® Asset Manager

Track All Your Resources

See and Track Your Computer and Non-Computer Assets Easily and Intelligently

"This software provides exceptional control, generates stellar reports and integrates with several other packages, all behind an intuitive interface that lets you handily manage hardware and software assets. Asset Manager's tenacious autodiscovery is the best we've seen, and its zero-footprint deployment requirements will make desktop-management staff happy."

— 11th Annual Well-Connected Awards: Business Applications, Network Computing, April 2005; Asset management category winner: LANDesk® Asset Manager

IT departments are under increasing pressure to adapt to standardized business practices and more effectively demonstrate the value of IT spending. That's why people, processes and tools must integrate smoothly with existing business practices, so you can be more accountable to business needs.

LANDesk® Asset Manager: Making It Possible

LANDesk® Asset Manager extends the power of the LANDesk® management platform to help you see and track your enterprise's computer and non-computer resources—associated users, contracts and maintenance agreements and more—all through the same single console you use for systems, security and inventory management. You gain the power to support business best practices for asset management across your enterprise.

With LANDesk® Asset Manager, you have the IT asset management tools to:

- Control costs and increase efficiency by knowing what assets you have, where they are and how they're being used.
- Support business practice standards, such as IT Infrastructure Library (ITIL), by easily tracking and managing the entire IT asset management life cycle.
- Improve service with fast access to current and accurate data through LANDesk's easy-to-use, Web-based console.
- Manage changing IT and non-IT assets efficiently.

If you can name it, LANDesk Asset Manager can track it—contracts, maintenance agreements, telephones, office equipment and more. Plus you can access all your stored asset data from a single asset repository, automatically discover computers on your network to create detailed inventories of installed hardware and software, and monitor and report on software license usage.

Control Costs

When you can see the relationship between your contracts, service agreements and tangible assets, you can use that knowledge to understand how assets are used—or not used. And you can plan updates and replacements and negotiate contracts, so you only pay for what your business really needs.

LANDesk® Asset Manager extends the power of both LANDesk® Inventory Manager and LANDesk® Management Suite to give you a consistent, unified solution for knowing what you have, where it is and how it's being used. An included library of asset templates lets you quickly capture key data or build custom forms to define the specific data you want to capture. You can track contracts, vendor data, service level agreements, asset tags and other information as well as non-computer assets, such as printers and cell phones. And you can easily relate contracts, licenses and service agreements to specific computers or users to create a more complete picture of your physical, contractual and financial assets.

Support Business Practices

An effective tool doesn't replace your tested processes, it extends your access to information and services, so you can do your job the best way possible—your way. Standards, such as ITIL, are designed to help enterprises implement business best practices for IT asset management and accountability. And a good tool supports any standard or practice.

LANDesk® Asset Manager provides business management, financial and IT personnel access to data entry, administration and asset tracking tools through definable, role-based accounts, allowing each user access to only the features they need to do their job. Data is stored in a single asset repository, so information remains consistent and unified for all business departments and users. Easy data entry and query tools support both internal and external audits and facilitate regulatory compliance. Data is exported in a standardized format, so you can perform analysis and reporting using your own task-optimized tools and methods. Or you can use built-in business intelligence reports to extract the data you need.

Improve Service

You can access LANDesk® Asset Manager's Web-based console from anywhere on the corporate network for anytime, anywhere asset maintenance and:

- Track costs, purchase dates, lease expiration, vendor contacts and more.
- Relate assets with computers, users, service agreements or any other tracked asset, including service records and vendor listings.
- Search asset data to quickly find specific information; link assets directly to computers managed through LANDesk® Management Suite or LANDesk® Inventory Manager to access your latest inventory data.
- Relate contracts and leases to physical assets and easily track and report on lease expirations or other service elements and have multiple points of access to critical data.
- Gain fast access to current, accurate data and provide more effective service for your business, financial and IT staff.

Improve service levels for both your internal and external customers, combine LANDesk Asset Manager with LANDesk® management solutions.

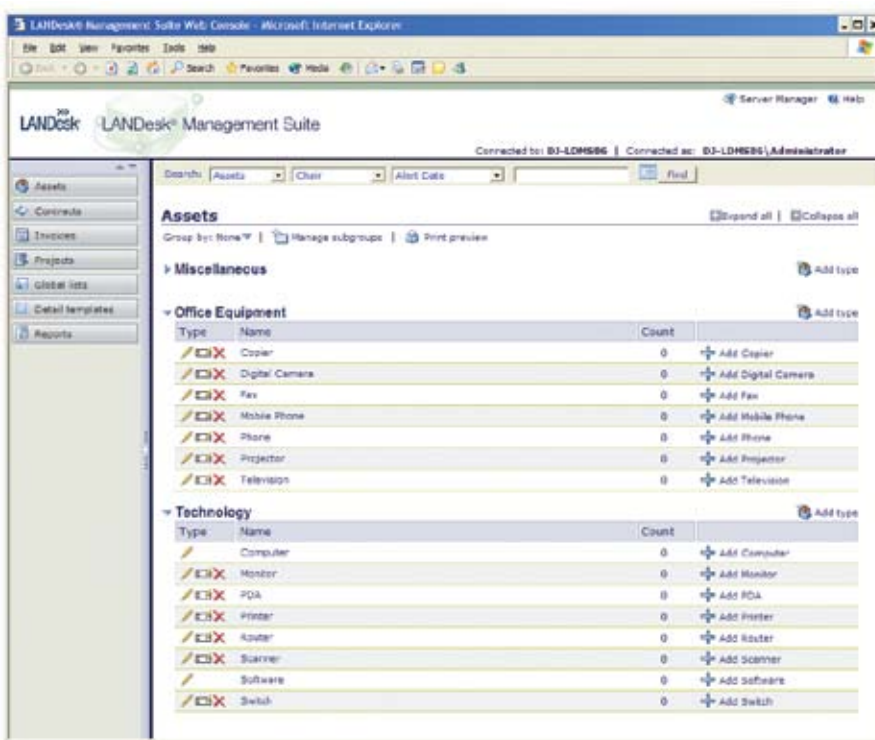

Complete IT Asset Management

LANDesk® Asset Manager can be added on to LANDesk® Management Suite or LANDesk® Inventory Manager to deliver effective IT asset management across the enterprise, through:

- Autodiscovery that finds all the IP-based computing devices on your network automatically, giving you more complete asset management capabilities.
- Software license monitoring that informs you of license usage, so you can help ensure compliance with software license agreements and reduce the risk to your company.
- Single asset repository that brings all asset information together in a single, consistent database accessible to stakeholders from any Web browser on the network.

LANDesk® solutions bring all the pieces together in a consistent, extensible package that supports your business processes.

LANDesk® Asset Manager lets your IT, business management and finance staffs track any asset type and maintain detailed records—all from a unified asset repository.

Key Features

Asset Tracking

- A single asset repository unifies asset, autodiscovery and inventory data in a single database for consistent, secure access.
- User-defined asset structure lets you order and group assets your way for easy access to asset data.
- User-configurable forms let you collect exactly the data you need to support your business processes.
- User-defined notification dates trigger an email informing you of pending asset requirements or expiration dates.
- Global lists and templates provide reusable building blocks that automate form creation and data entry, giving you consistency across asset types.
- Inventory linking connects asset forms to current inventory data from the management database.

Access and Administration

- User-defined alerts let you know it's time to perform specific actions when an expiration date occurs.
- Web-based console snaps into the LANDesk® Web console for anytime, anywhere access across the network.
- Role-based administration controls and secures access to asset data to support asset administrator, data entry and reporting roles.

Reporting and Analysis

- Importable and exportable asset data in XML format gives you extended data storage, tracking and analysis.
- Predefined business intelligence reports provide quick asset overviews.
- Custom reports provide access to specific asset data with support for list, summary- and date-based reporting.
- Data import and export enables asset analysis using your own tools and data import helps automate asset data entry.

Console Support

The LANDesk® Asset Manager console is an extension to the LANDesk® Management Suite Web console and can be accessed from any computer running Microsoft* Internet Explorer* 6.x, SP1 or newer.
